July 2, 1984

Mr. Stephen B. Hamilton
General Electric Company
3135 Easton Turnpike
Fairfield, CT 06431

Dear Steve:

The date of August 1 is suitable for Joe Nassif and I to meet with you, Susan, and anyone else from General Electric who you care to bring to discuss the status of various PCB issues. We may possibly bring with us Dr. Paul Michael, our chemist who is managing several of our research programs on PCBs.

We will be happy to come to Washington and perhaps may get in the evening before. If we choose to fly up on August 1, we could be at your office by 10:30 a.m.

We suggest the following items for the agenda and hope you will supplement it and let us know in advance anything you would like to add to the discussion.

1. Transformer Fire Risk Assessment Study
2. Transformer Pyrolysis Studies
3. [redacted]
4. G.E. Customer Reactions To Possible Transformer Phase-Out
5. New EPA Rules
   - Spill Clean-Up
   - New Transformer Rules
6. Recent Health Effects Studies
   - Dr. Emmett Of Johns Hopkins University
7. Other
   - G.E. Microbial Degradation Work

We look forward to meeting with you again. We have a lot to discuss in a rather short day.

Sincerely,

John H. Craddock
Product and Environmental
Safety Director
