Re: Cecil Scott, et al v. Monsanto Company, et al

Dear Mr. Hall:

This letter will constitute my report to you in this case.

I received my medical degree from St. Louis University in St. Louis in 1932 and was employed by Monsanto from 1937 to 1974, with a break for military service from 1942 to 1946. From 1937 to 1942, I was plant physician at what is now Monsanto's John F. Queeny Plant in St. Louis. In addition, I acted as medical advisor to the Company's management. From my return to Monsanto from military service in 1946 until I retired in December, 1974, I was Medical Director. As Medical Director, I was responsible for instituting and administering an occupational medicine program for the protection of worker health, and a toxicology program for the purpose of assessing the toxicological properties of the Company's products. I am certified in internal medicine and occupational medicine and am on the faculty of St. Louis University as an assistant professor of medicine.

As a result of the foregoing, I am familiar with Monsanto's experience with polychlorinated biphenyls in the area of occupational health. I am advised that Monsanto manufactured polychlorinated biphenyls from 1935, when it acquired Swann Chemical Co. until 1977. During that period and while I was employed by Monsanto, there were no instances of occupational disease or complaints of adverse impact on the health of Monsanto workers resulting from exposure to polychlorinated biphenyls at either of the locations where this material was manufactured. No claims by Monsanto employees for Workers Compensation benefits for injuries allegedly resulting from exposure to polychlorinated biphenyls were made during the time I was employed by Monsanto.

Very truly yours,

R. Emmet Kelly, MD
