CANCER AND CHLORINATED BIPHENYLS

JNH/cdl

AF SILVEY - Brussels

The statement to be used when asked whether chlorinated biphenyls cause cancer is as follows :

" We have no evidence to suggest that Aroclors are carcinogenic. Experience in manufacture and use over a period of 30-40 years has not revealed any carcinogenic tendency."

Alf Vodden is asking St. Louis Hygiene Dept. for a statement on their letter heading so we can reproduce it and give to customers.
