Additional Vacuum Drier
$25,000

This pre-authorized appropriation will provide an additional vacuum drier for Laurinburg Plant. Its installation will permit a considerable increase in plant production capacity of COBRA Brake Shoes.

The appropriation request states that the new drier temporarily will not be connected to the solvent recovery system. The Heating and Ventilating Section of DPE informs me that this will not create either a fume or flammability problem, but will result in a visible white plume discharge from the drier stack. I cannot presently determine if this plume will prove objectionable. It may be necessary to provide some means of emission control.
