Dear Sirs:

I have previously received samples of Arochlor mixtures from your company for use in producing gastric hyperplasia in nonhuman primates. Unfortunately, although we have produced signs of systemic toxicity with the chemicals provided, we have not been able to produce gastric hyperplasia. If possible I would appreciate receiving a sample of Arochlor 1242-AD73. We plan to feed approximately 10ppm in the animals food for 3-4 months and therefore will only need a small amount, 10mg should be sufficient. Thank you in advance for your cooperation.

Sincerely,

Sam Silverman
