*A NEW STATE CHAMBER SERVICE . . .*

# INDUSTRIAL WASTE INFORMATION EXCHANGE

In view of the increasing scope of the problems connected with the generation, reuse and disposal of all forms of industrial waste, your State Chamber is establishing an Industrial Waste Information Exchange as a service to New Jersey industries.

To be operated on a confidential, non-profit basis, the Industrial Waste Information Exchange is designed to promote reuse and recycling of industrial waste material by listing such material which may be available or wanted by others. These listings will be published and distributed monthly to subscribers beginning in June 1978; those who wish to utilize this service will find the appropriate form on page three of this communication.

## BACKGROUND

Legislation, both State and Federal, in recent years has contributed substantially to the problems of industrial firms in the handling of by-products and waste material. Environmental considerations and regulations preclude many of the historical methods of disposal such as open burning or use of landfills for certain materials.

The waste exchange concept is currently operating successfully in several European countries, as well as in several localities in this country. The chemical industry, in particular, has accomplished a lot in developing markets among individual firms in which the by-product from one plant has been utilized or reprocessed by other firms.

Saleable wastes are already being handled satisfactorily in many cases; nothing in this Exchange effort is intended to interfere with existing arrangements and agreements.

## OPERATION AND PROCEDURE

The Exchange will function as a clearinghouse for information about types and quantities of industrial waste materials. It will gather and disseminate information monthly on waste material offered by companies and on waste materials which are wanted by other companies.

Listings of materials available or wanted are solicited by the Exchange. The Exchange provides a special "Material Information/Subscription Service Form" to interested firms on which they can make their wishes known (see page three). These

listings of materials available or wanted by respondent firms are handled on a confidential code number basis so that there is no disclosure of the firms involved.

Names of firms inquiring about specific listings will be forwarded promptly to the firm which placed the listing. It is the responsibility of the firm having the material to choose the inquirer, if any, with which it wishes to negotiate; the Exchange will not participate in negotiations.

The Exchange will not be responsible for determination of the character or content of any item listed, nor the determination of what may constitute a hazardous substance or create a hazardous condition. The Exchange will not make recommendations with respect to any legal requirements, particularly for the storage, handling, transportation, or disposal of what may be defined as hazardous substances.

Firms offering listings of available materials are not required to divulge any information as to what means they now use, or have used in the past, to dispose of waste materials.

As a matter of information, there is no governmental involvement whatsoever with this State Chamber-sponsored program. Although both State and Federal environmental control agencies have encouraged us to provide this service, the activity is entirely a private operation with no governmental support or participation.

LISTINGS

The Exchange solicits and will publicize two types of listings: that material which is "Available"; and that material which is "Wanted" by participating respondents. Additionally, if a firm also wishes to subscribe to the monthly "Listings", that service is available as a separate option.

Each listing will include an Exchange code number, a classification number, a description (and/or analysis) of the material, quantity per week or month, and general location where the material exists or is wanted. Listings will be carried for whatever period designated by the company.

A "Material Information/Subscription Service Form" is on page three of this communication. Only one item is to be listed on each form, so please make additional copies of each "available" or "wanted" item. See page four for proposed sample listings.

If you have waste material which you believe may be of use to another firm, or wish to list material wanted, and/or wish to subscribe to this service, please complete the "Material Information/Subscription Service Form" on page three, and forward to the New Jersey State Chamber at the address printed above.

Material Classification: Please select most appropriate classification of waste material so that the listings can be easily grouped in the monthly "Listings". Identify each waste to be listed according to its numbered classification.

Classifications:

1. Acids
2. Caustics
3. Alkalis (lime, kiln dust)
4. Solvents
5. Oils: (Describe)
6. Fuel value hydrocarbons
7. Chlorinated hydrocarbons
8. Spent Catalysts
9. Non-ferrous metals
10. Ferrous metals
11. Sulfides
12. Minerals
13. Plastic scrap
14. Salts
15. Inert material
16. Others: (Describe)
