H. Bergen - HBERG
R. E. Keller - JFQ
W. K. Johnson - WJOHN
Cumming Paton - CPATO
K. A. Wells - KWELL
R. E. Kelly, M. D. - RKELL

Yesterday we mentioned again that the Swedish work by Widmark had not been published. I find that in the bibliography for the paper which Risebrough is to publish shortly this comment -- "Considerable effort was made to identify the unknown peaks present in the chromatograms but these attempts were unsuccessful until the reports appeared from Sweden (22,23) and Great Britain (24) identifying polychlorinated biphenyls in European wildlife."

The bibliography shows the references to be:

22. Jensen, S., New Scientist 32, 612 (1966).

23. Widmark, G., J. Ass. Off. Anal. Chem. 50, 1069 (1967).

24. Holmes, D. C., and Simmons, J. H., and Tatton, J. O'G., Nature 216, 227 (1967).

I am not sure we have copies of 22 and 23. I know I don't.
