Subject: Benzene & Residual Risk

Patsy: I left you a voicemail. Exactly what residual risk rule are you concerned about?

Pat:

I am aware of several Title III rules that she could be referring to. I will check with Patsy to see exactly what she wants to do.

Clay do you see upcoming rulemakings in Title III that would justify this effort? I dont see any value for Title I.

Below is a note from Shell (Patsy Clegg) suggesting some joint industry activity on benzene in response to a Clean Air Act rulemaking. She is looking to gauge interest at CVX.

I've lost touch with the CCA over the last few years and don't know what RR issues are eminent. Should someone from PGPA make the first contact with Patsy to help define the issue? Or would you like me to pursue it?

Russ,

I have worked with Patrick Beatty on the Shanghai Health Study. Since Patrick's retirement, I am trying to establish new contacts at ChevronTexaco. Patrick gave me your name. I am in the process of gauging interest in forming a panel to work on benzene as it relates to the impending Clean Air Act Residual Risk Rule. While there are efforts at both API and ACC on this topic at a high level, Shell believes that there is an opportunity to focus efforts on benzene. We would suggest using BD and EO work as a model. I am sending this to you to gauge CT's interest. See original note below. I will be attempting to organize a kick-off meeting in late Jan / early Feb.

Look forward to hearing from you.

Regards,
Patsy

Just following up to gauge your company's interest in potentially participating in an industry panel focused on benzene and the impending CAA Residual Risk Rule. I have not heard from you or if I did, I seem to have lost
