TML--European Authorities

July 29, 1960

When Dr. Kehoe reported to us upon his trip to various European countries in connection with advising the medical authorities of the advent of TML, it was agreed that he would furnish us with a list of the officials in the various countries and that we would pass this on to our customers for purposes of notification of the commencement of distribution of gasoline containing TML.

Dr. Kehoe has now furnished me with a list for a number of countries as follows:

Belgium (Brussels)

Dr. Kisters
Deputy Chief Medical
Inspector of Factories
of Government Labour Office.

Norway (Oslo)

Dr. Bruusgaard
Medical Chief to
Labour Ministry.

Denmark (Copenhagen)

Dr. S. Haussen
Deputy to Chief Medical
Officer, National Health
Service.

Germany (Bonn)

Dr. Dierkes
Head of Medical Department,
Ministry of Labour.

Sweden (Stockholm)

Dr. Olaf Wohlin
Acting Chief of Public
Health Division,
The Royal Medical Board.

or

Dr. Bengt Kylin
Acting Head of Department of
Occupational Health
The National Institute of
Public Health.

Mr. M. P. Murdock

July 29, 1960

Finland (Helsinki)

Prof. Leo Noro
Director of Institute of
Occupational Health,
Consultant in
Occupational Health to
Government Authorities;
Medical Director of Esso,
Finland

Holland (Leiden)

Dr. F. H. Bonjer
Head of Department of
Occupational Health,
Netherlands Institute
for Preventive Medicine.

You will note that in some cases the full name of the doctor is not available, and for the most part, we do not yet have addresses. However, Dr. Kehoe advises that the local representatives of the oil companies will be able easily to identify these men and know where they are to be reached.

In addition to the above countries, Dr. Kehoe recommends that in the case of Italy, we should advise Associated Ethyl when gasoline containing TML is to be distributed so that they may bring the matter to the attention of Dr. E. Vigliani. No official notification is required in Italy, but Dr. Kehoe feels that some advice through Dr. Vigliani would be in order. In France and Switzerland, we are not advised that the necessary procedures for amendment of regulations have been completed. In the United Kingdom, no formal notification of official nature is required, but Dr. Kehoe recommends that when distribution in England is imminent, Associated Ethyl should be advised in order that they may take any steps considered advisable.

In Venezuela, a permit for the use of TML has been issued and further official notification would not be required. However, in case consultation or a courtesy notification is considered desirable, communication may be had with Mr. Erich Schmidt, Section of Industrial Hygiene, Division of Sanitary Engineering, Ministry of Health and Social Security, Apartado 1723, Caracas.

As the foregoing indicates, Finland and the U. K. are already clear so far as TML is concerned. Steps are being initiated by Dr. Kehoe to take care of the matter in Austria.
