Mr. M. E. Scovill
General Electric Company
Capacitor Department
Hudson Falls, New York 12839

Dear Mike:

It was a real pleasure to have opportunity to visit with you and your associates at Hudson Falls last week. It would be nice if you folks were to come to St. Louis some time and be our guests.

The consideration of silicone oil and similar material arose. Enclosed is copy of our technical brochure describing our OS-59 silicate ester. This silicate ester has essentially the same electrical properties as does refined silicone oil used for capacitors. The silicate ester probably has an advantage by not being as volatile as silicone oil of comparable low viscosity. This would make handling the silicate ester simpler.

However, the prime thing of interest is that we could make this silicate ester available to you at significantly lower cost than silicone oil, in the event that you develop a commercial application.

Please review your possible interest in this OS-59 silicate ester and let us know what amounts you would like to have for experimental work.

Best regards.

Very truly yours,

P. G. Benignus
