Q If we look at people from that time period, and I'm just looking for that marker, what was the time period they published this paper? It was '85, right?

A It came out in '85. It involves telephone interviews of next of kin from 1975 to 1980. So these people were exposed pre-'75.

Q Okay. And for that group of individuals do you have a, what would you expect the relative risk for insulators during that time to be, do you have a --

A Depends what kind of insulators. If they are in the shipyard, you know, it's fairly high.

Q Okay.

A I think 7 to 10 is not unusual in the shipyards. Especially if they are smokers.

Q That's not relevant -- and for nonshipbuilding insulators do you have an idea?

A Well, they got the boiler installation at 4.5, shipbuilding; shipyard, 4.3 according to Spirtas. I don't know if I can be any --

Q Okay. What did they have for, did they look at construction or demolition, Spirtas?

MR. LANKFORD: I don't know if your purpose is completely limited to this but I don't know if you caught my statement earlier that he's not offering any opinions with respect to alternative exposures.
