INDUSTRIAL HYGIENE PROBLEMS

TO: J. M. MacMillan, M.D., R. H. Mansur, H. W. Cole

FROM: E. C. Irby, M.D.

DATE: February 22, 1974

Item #1: 2/19/74
Call from Mr. Povedano, Experimental Research, Fulton. On receipt of my memo concerning asbestos all milling of asbestos floats was discontinued. They have a small ingot casting operation and would like to know what needs to be done to bring them in compliance with OSHA's regulation. They are resistant to buying expensive floats from outside contractors. I promised them that one of our industrial hygienists would get in touch.
Discussed with RHM.

Item #2: 2/19/74
Reference to angiosarcoma results from exposure to vinyl chloride monomer. A copy of a letter from Woody Vogel makes it clear that some of this substance remains in the product which we purchase and that Goodrich takes no responsibility for any exposure which we may have in our processing. Also referred to OSHA, NIOSH, and lay press articles.
Problem was discussed with RHM.
