Date September 10, 1980

Subject EXAMINATION OF BBH MONITORED ROOFS IN THE HOUSTON, TEXAS, SHREVEPORT, LA. AND BATON ROUGE, LA. AREAS

BBH requests permission to send two people into the FS sales area in late October or early November to inspect standard and experimental shingles to obtain long term weathering data. These roofs include standard organic shingles in the Houston, Texas area which also have test decks in the 3M test deck area. Also, in Houston are some original glass thick butt shingles and some roofs from the Smith inspection program of Bird and competitive organic shingles.

In Shreveport, La., there are three test roofs with experimental Wind Seal dots as well as four with thick butt glass mat shingles and six standard shingled roofs from the Smith inspection program.

Baton Rouge, La., has one roof with experimental Wind Seal dots and eleven roofs from the Smith program.

If it can be arranged with the homeowners consent and understanding that they are not experimental in any way but just a "new design", we would greatly appreciate adding some Architect 70 roofs with four Wind Seal dots at this time. These would be monitored to see if this affects weathering in any way. We leave this to your discretion. All three areas would not be needed but we feel we should follow the weathering of some with four dots to see if your approach is favorable towards reducing horizontal cracking.

In all areas we would be accompanied by the local salesman and would leave it up to him to contact the homeowner. We would have to have permission to climb on the actual roof and take pictures. A collapsible ladder carried by the salesman would seem to be a necessity. As far as timing is concerned, we are looking to the end of October or beginning of November.

Attached is a list of the actual roofs already in the computor. We certainly would eliminate any with complaints or homeowner's reluctance.

When actual time is set up by your division, we will set up inspection of the test decks with 3M.

RFJ/ac Robert F. Jagocki

attach.

STD SHINGLES ON 3M TEST DECKS AND ROOFS IN HOUSTON

1. Mr. W. D. Schoocraft
   3830 Sun Valley Drive
