April 4, 1986

Congressman Douglas Barnard, Jr.
236 Cannon House Office Bldg.
Washington, D. C. 20515

Dear Mr. Barnard:

On January 23, 1986, as you know, the EPA proposed a rule which would immediately prohibit the manufacture and sale of certain asbestos containing products, including asbestos-cement A/C pipe and fittings.

As a management official involved in the manufacture of A/C pipe, this proposal is particularly distressing to me for the following reasons:

* Based upon current practices, we believe it is safe to manufacture and use A/C pipe. In fact, many agencies, including the Government, for many years have been studying the health affects associated with the use of A/C pipe and there is no evidence to conclude that this product poses a hazard to public health.

* There is no current, economically acceptable, substitute for A/C pipe for some uses. Thus, costs to me as a consumer of safe potable water will greatly increase, as it will also to many others.

* It will impose severe economic business loss on me without medical, scientific, or economic justification based on proven or established evidence or fact.

* Many jobs will be lost, and numerous businesses will be placed in serious jeopardy (mine included).

* In this case unjustified fear and hysteria associated with anything carcinogenic is seemingly outweighing reason and fact.

- The improvement or increased protection to public health will thus be zero, while the economic and personal loss will be enormous.

I am, therefore, asking for your support in opposing this proposed ban on A/C pipe, based on the fact that EPA's action with regard to A/C pipe is not based on sound scientific judgement and that the product is safe to produce and use.

Respectfully yours,

J D Partee
