  Reduction Maintenance

Subject
- OSHA Committee Meeting - December 12, 1975

710.504

Jeff Niemann and Nolen Blake will schedule personnel from Carborundum, Johns Manville, and Babcock & Wilcox for plant visitations to discuss alternate materials to replace asbestos in the Reduction Plant.

John Spencer will coordinate a meeting with representatives from Engineering, Technical, Operations, Maintenance, and Environmental to review the suitability of the new cathode mixer insulating blankets and make recommendations as to installing this type of insulation on the anode mixers. A recommendation will be made by December 29, 1975.

All pipe insulation in the plant needs to be identified as either asbestos or non-asbestos so that it can be properly handled during demolition and replacement type work. John Spencer will give the Committee a recommendation on this by January 5, 1976.

The Safety Department will develop a J.S.P. for the proper method of disposal for asbestos materials.

All departments are requested to review outstanding OSHA work tickets and make certain that these are given the proper priority by the maintenance scheduling group.

The committee discussed Al Schroeck's hazard survey report, and since work was already proceeding on the exceptions that were reported, it was agreed that a meeting would be held on December 17 to discuss progress.

It was pointed out that the Plant has spent approximately $25,000/YTD on OSHA projects.

The next meeting will be held on December 17, 1975 at 9:30 in my office.

↑ Jeff don't miss this meeting
