October 27, 1970

Mr. Steven Bunish
Research Director
Anaconda Wire and Cable Co.
Marion, Indiana 46952

Dear Mr. Bunish:

Please accept my appreciation for the time you and Dr. Ling spent in discussing with me the trends and needs in the cable industry. These lengthy discussions were very helpful to me in obtaining a better understanding of this industry and how Monsanto might be of more service. It appears that the specific needs of your area are more closely related to our Hydrocarbons and Polymers Division than to the capabilities of our Organic Division. However, I still hope to re-contact you within a few months concerning specific product possibilities.

Following your conversation, I visited last Friday Mr. Mark Wolfe in Sycamore, Illinois. These discussions concerning the communications cable industry were also helpful.

I also appreciated your taking the time to discuss with me your very interesting hobby. The attached article from Newsweek Magazine is a partial answer to one of my questions: that is, how can an amateur make a contribution to science.

Yours very truly,

Michael F. Baber
Project Manager
Commercial Development
