OFFICE MEMO

BROWN & ROOT, INC.

TO: Rick Carter, Mid-Valley
FROM: Carl Richardson
SUBJECT: Asbestos and Fiberglass Sampling

DATE: June 23, 1975

Enclosed please find the information you requested concerning Asbestos and Fiberglass Sampling.

For personnel sampling, a gravimetric pump is needed. Distributors in the Houston area are: (1) M.S.A. (Model G - approximately $235.00), (2) Tuckaberry (Model Bendix Microair - approximately $200.00).

Millipore Corporation supplies an asbestos filtering casette which includes all accessories needed. Model MAWP 037A0 which costs approximately $42.00 for a box of fifty. According to the Millipore Corporation, this casette can also be used for fiberglass sampling. These can be obtained by writing or calling:

Millipore Corporation
Bedford, Massachusetts 01730
(617) 275-9200

A calibration setup will be needed for the personnel sampling pumps. A "homemade" unit can be built for approximately $30.00, or a commercial unit can be bought for approximately $70.00 from Curtis-Mathewson. The calibration setup is a necessity. A certified laboratory, according to NIOSH Standards, will be needed for counting the casette samples.

If any further information is needed, please feel free to contact me.
