Mr. James V. Chambers
Laboratory Supervisor
State Department of Agriculture
Division of Foods, Dairies, and Drugs
Laboratory Section
Reynoldsburg, Ohio 43068

Dear Jim:

Here are the results of the second and third check samples of milk for PCB's.

Sample No.	% Fat	ppm PCB
41283 (A_2) plastic bag	3.52	0.22
41571 (A_2) ✓ plastic bag	3.52	0.24
41571 (B_2) jar	3.49	0.23

These results are on the whole milk basis and the percent fat is based on the results obtained using the Mill's triple ether extraction.

Confirmation on these residues was based on retention data of both the PAM GLC column and the stability of the residues to alkaline hydrolysis.

If you desire any additional information, please call.

Sincerely yours,

Joseph C. Brucciani
Acting Director, Laboratory Branch
Cincinnati District
