PCB Spill Clean-Up

Industry trade groups, including CMA PCB task force and the electrical industry (NEMA and EEI), met with environmental groups (EDF and NRDC) in Washington to discuss a consensus rule proposal for PCB spill clean-up. Tentative agreement was made to propose to EPA spill clean-up levels in the range of 25 ppm depending on various site conditions. The consensus proposal is scheduled to be presented to EPA before October 1 in an effort to head off EPA's proposed spill policy which may require clean-up to background or zero PCB level.
