
HOLOCAUST!

0222822

A missile site disaster that fire resistant fluids from Monsanto can stop before it starts

Flame, red hot surfaces, electrical discharge sparks, respectable missile launching sites. An electrical short can burn through a fluid line to ignite a flammable hydraulic fluid. A flammable transformer oil spewing from a ruptured power transformer can contact an electrical arc to burst into flame. A flammable hydraulic fluid under high pressure in a lift or elevator can feed, intensify, explode a small fire into a conflagration. Avoid the risk of such accidents. Such fire hazards can be prevented before they start. Monsanto offers a wide spectrum (over 15) of fire resistant dielectrics, hydraulic fluids, lubricants for design into transformers, loaders, elevators, compressors, or electrical generating systems.

Check your needs with Monsanto's FLUIDESIGN service

1. More job proven functional fluids than any other manufacturer in the world
2. Design oriented fluids knowledge to help you develop safer, more compact and more reliable equipment
3. Year-ahead research on new types of fluids
4. Sophisticated field application experience with fluids
