Because of the unique features of an askarel transformer, you can place it right at the point of power usage if you desire. No need to concern yourself with protecting it from contamination, subdue the sound level or run expensive lines from distant locations. You can place an askarel transformer where it best serves your system at the lowest cost.

Askarel fire-resistant transformers are completely sealed against contamination. This eliminates the need for expensive clean-up and drying out. This one fact alone can give you big dollar savings.
