TO: ALL SUPERVISION - LIST "A"

FROM: A. H. NICKOLAUS AHN

DISPOSAL OF ASBESTOS

Starting immediately bags or containers of asbestos containing wastes (see S&F Procedure No. 68) should not be placed in the dumpsters. They should be collected separately and shipped (by calling trucking) with a "Waste Transfer Ticket" (see S&F No. 17) to the toxic pit (Pit No. 1).

We have been disposing of the bagged asbestos wastes in the landfill. This has been satisfactory from an environmental standpoint but during compacting and covering the trash there with a bulldozer, bags have been broken, and dusting experienced causing an industrial hygiene problem.

Neither S&F No. 17 or 68 are explicit as to where asbestos should be disposed and they will be revised to do so.
