Corporation under contract to the Environmental Protection Agency. We understand that results from this contract research will not be known until the middle of 1972 at the earliest. It is our opinion that the results of this study will verify again that airborne particulate matter from vehicle brakes and clutches does not constitute a dangerous health factor in Urban air pollution.

We believe that the proposed ban on manufacture and use of asbestos containing friction material is unwarranted and unnecessary. We recommend that Part VII, Section 702 be removed and not made part of regulations proposed by the Illinois Pollution Control Board.

Very truly yours,

G. R. Graham
