FEATURING THE COMFORT OF QUIET

in Hotels, Libraries, Conference Rooms

SKILL

shapes a ceiling

This beautiful light reflective sound absorbent dome is the work of a skillful crew of artisans. Its accomplishment is a point of pride to the men who did it, a source of beauty for the reception lobby it graces. Similar crews of skilled, experienced workmen are maintained in your area by the acoustical contractor named on the back cover of this magazine. His facilities permit him first to give you sound advice on your acoustical problems, and then provide the skilled service required to solve them. Like any great artist, he has fine instruments to work with. He offers the finest of acoustical materials: ACOUSTONE, a mineral tile combining beauty with incombustibility, and AUDITONE, the budget-wise fiber tile with a distinctive slotted pattern. Both are manufactured by United States Gypsum Co.

call the number on the back cover for prompt, friendly, skilled attention to your acoustical needs.

Acoustical

The Phoenix Hotel, Lexington, Ky. is a 375 room unit undergoing remodeling and enlargement by Holabird & Root & Burgee, architects. The new lobby includes ACOUSTONE mineral tile for the audio-comfort of guests. POCHEL-CHOWNING, Louisville, Ky., acoustical contractors

is "Standard Equipment" in Hotels

THESE ARE familiar scenes to traveling men. ACOUSTONE mineral tile and AUDITONE fiber tile acoustical ceilings are becoming increasingly familiar to them. [illegible] That's because hotels the nation over recognize the value of these sound quieting materials and their importance to the comfort of their paying guests. Hotels have learned that customer preference for their establishment is based on customer comfort and that tiles which quiet have contribute materially to comfort in public rooms—lobbies, dining rooms, banquet halls and exhibition rooms.

Any business which serves the public within its own walls can profit from acoustical treatment. Call the nearby company named on the back cover for information.

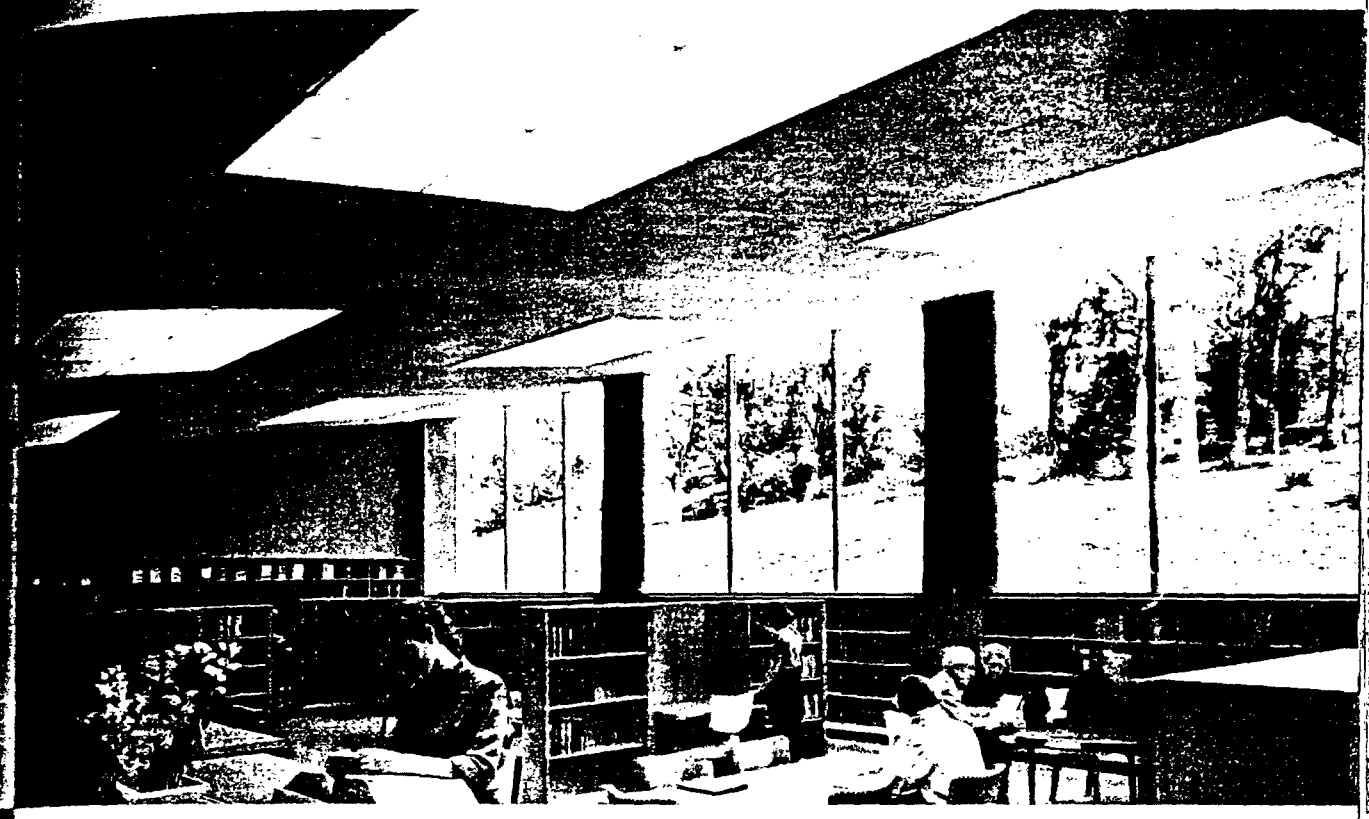
liscipline

LIBRARIANS aren't the stern disciplinarians that they once had to be. Acoustical tile has taken over part of the job of keeping reading rooms quiet. Instead of every whisper bouncing from a hard ceiling to whisper again (at about 96% of its original loudness), it now comes back in roughly 30% of original intensity, usually too soft to be heard. That is because a modern mineral acoustical tile of AUDITONE fiber like this absorbs at least 70% of the sound that strikes them. It's enough to make a big difference to small impatient boys and to serious students alike, when they use library facilities.

ncisco, Calif. is one examples of small in the lounge, where progress, the Acous- d dark brown on a pe of the roof.

Appleton & Wolford, architects
F. K. PINNEY, INC., San Francisco, acoustical contractors



The reading room ceiling slopes up to great windows, and reflects light while it absorbs sound.

Entrance area and reading room of the Garret W. McEnerney Law Library within Boalt Hall of Jurisprudence, University of California, Berkeley, have beautiful sound quieting acoustical tile overhead.

Room to Relax in Cattle Country

ONE of the nation's most interesting cattle ... is Tovrea Land and Cattle Co.'s headquarters on the ... of Phoenix, Ariz. The main office building includes barber shop, restaurant and other facilities for the convenience of cattle men doing business there. A unique adjoining building houses a bank.

The penthouse of the main building shown here is the private clubroom of the Tovrea family. Its great fireplace dominates this room and the suite includes a kitchenette, bedroom and bath for entertaining and housing out-of-town guests. Notice how compatible the beauty of ACOUSTONE mineral tile is with this sturdy type of interior decor, as well as with other types shown elsewhere in this issue. Its sound quieting properties and incombustibility are other assets.
