A Yes, sir.

Q And during the process of preparing brakes to go on trucks like were used at the post office, what kinds of operations are done to brake materials that can produce asbestos in the air?

A Well, in the course of removal did you say?

Q In the course of preparing brakes to be put in, installation.

A All right. In the course of the -- the problem with brakes and wheels is that after a certain period of time the brake drum, that is the metal part against which the brake shoes push, wears down a little bit and it changes in diameter so that the part is no longer exactly what it was when it was brand new.

So in order to have the brake shoes expand evenly against the inside of the brake drum, you need to grind apart those brake shoes so that they meet up evenly with the whole brake drum, so that when you put on the brakes, they push up against the brake drums.

And this isn't just one little hot spot that
