Reduction Plant
Revere Road
Scottsboro, Alabama 35768

Dear Mr. Myers:

Just a note to confirm that we have released five drums of Therminol FR-1 as makeup into your existing system. We would like to have your cooperation, however, in considering a conversion from Therminol FR-1 to either Therminol 66 or Therminol 55.

As discussed by telephone, Therminol FR-1 is a PCB containing material. The PCB concentration in our environment has increasingly come under the scrutiny of various governmental agencies and scientific laboratories. In some studies, certain PCBs have been found to be persistent, an environmental contaminant and, possibly, injurious to certain forms of bird, aquatic and animal life. Accordingly, it is very important that PCBs be kept out of the food chain.

We have already instituted a program of no longer selling any PCB material into any new systems. We are also encouraging all existing systems to convert to a non PCB material such as Therminol 55 or Therminol 66, in a continuing program of eliminating PCBs from our environment.

After you have had an opportunity to review the Therminol 55 and Therminol 66 literature we would like to have our local salesman, R. J. Christman, visit you to assist you in this conversion. He is located in Atlanta (404 477-2270).

Please let us know if you have any questions.

Very truly yours,

James J. Roder
