WESTINGHOUSE RECOVERED AROCLOR

Lou Stark LSTAR

L. Bannister LBANN

The used Aroclor 1242 from Westinghouse's capacitor plant at Bloomington probably has phenyl glycidyl ether or PPO which might give skin troubles in certain hydraulic fluid formulations.

Lou, would you formulate filtered used Aroclor from Westinghouse (via Findett) into Pydraul 312 and Santosafe 300 and have Medical check it out for skin effects.

Loren, would you confirm that used Aroclor 1242 has epoxy and see if acid clay treatment or something akin to this treatment will reduce epoxide content.

No rush but should be started.

W. R. Richard
