Aroclor Toxicity

PJ

Recently we have had a "major incident" regarding the supposed contamination of wildlife by polychlorinated biphenyls such as the Aroclors manufactured at your plant. This primarily resulted from a story in the San Francisco Chronicle.

A statement from Monsanto about this matter is attached. If you should be contacted by editors in your area, you are free to use this statement in its entirety. However, please do not go beyond this material and please let me know immediately when you have had such an inquiry.
