Dr. Jenkins

THE FLINTKOTE COMPANY
East Rutherford, New Jersey

"We gave this company specifications of Aroclor 4465 taken from the Aroclor Manual, and have the following letter from them requesting more complete references to several tests.

"'Under the characteristic "Evaporation Loss" there is given ASTM D-6 Mod. I am familiar with ASTM method D-6-39T and I am wondering if that is the specification you use to determine the evaporation loss. The thing that puzzles me in your letter is the term "Mod". Could you please clarify that for me?

Also, under "Softenting Point" you do not give the ASTM number and I wish to find out what ASTM number applies here. I suspect method D-36 or E-28 is the method employed. Will you please advise me on this point also!".

Can you furnish us with this information?"
