THORPE

OFFICE CORRESPONDENCE

FROM WM. N. COLLINS

DATE SEPTEMBER 17, 1964

TO T. D. SMITH

SUBJECT SOUTHWESTERN REFINING FIREPROOFING INQUIRY

Russ Moake and I visited the jobsite and discussed this work with Doyle Williams, who is an old Lockett man and knew us from those days.

This is a very convenient area to get to, and is relatively uncluttered by equipment once you get to it. They would like to begin work around the first of October, and finish in two or three weeks if possible.

They already have the mesh on two of the towers, using welded nuts as spacers. However, Williams has now bought a large quantity of ready-made spacers to complete the other towers. His forces will attach all mesh and have the towers ready to gunited.

Williams would liked our proposal addressed in duplicate to H.H. Harding, the Purchasing Agent. He would also like some sort of per-foot price for structural fireproofing if we are interested. They have begun doing this themselves, but he thought we might be able to do it cheaper. However, we are not required to bid this structural work, and I imagine you will want to duck it.

As far as sticking exactly to the materials outlined in the UOP specs, Williams said he would be quite happy to see us bid alternates which would save him money.
