KRITZER Radiant Panel Heating

WE WELCOME YOUR INQUIRIES ON SPECIAL APPLICATIONS

Simple, efficient, and economical method of Radiant Panel Heating. KRITZER coils are positioned between joists slightly back of plaster line. They touch no part of the building, are not imbedded in any building material. Heating Contractor can install complete job without special cooperation from other contractors. Air between joists is heated which in turn heats floor and/or ceiling surfaces. For complete information on installation and advantages, send for *Bulletin 155*.

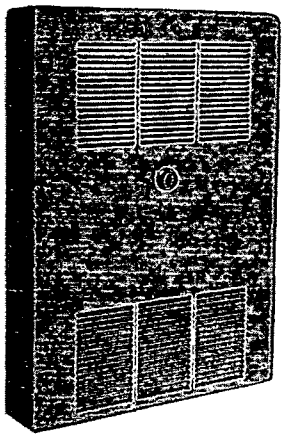
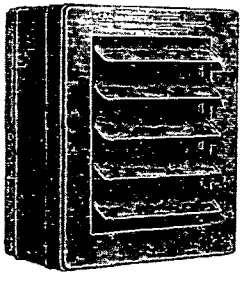
KRITZER HEATING AND COOLING EQUIPMENT



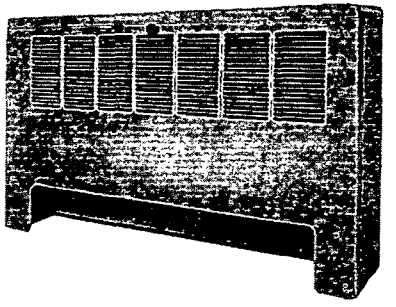
Dual Vectors

Low cost, combination heating and cooling units for residences, apartments and motels. Two models fit between studding. Easy installation. Clean, filtered air both summer and winter. Insulated enclosures prevent condensation. Individual room control optional. Free-standing types for remodeling.



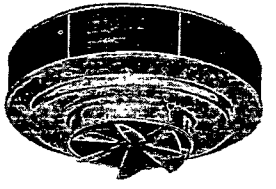
Horizontal Unit Heaters

All units have dynamically balanced, propeller type fans in deep venturi for quiet, efficient operation. Rubber mounted motors. Heavy gage steel cabinets. Baked-on enamel finish. Wide selection of sizes for steam or hot water.



Convector-Radiators

Floor, wall hung and recessed models. Famous KRITZER coil construction for steam and hot water. Bronze headers. Heavy, reinforced steel cabinets. Full range of sizes. Chain or knob operated dampers. Cabinets phosphatized. Gray prime baked-on finish.



Vertical Unit Heaters

All units have dynamically balanced, propeller type fans in deep venturi for quiet, efficient operation. Rubber mounted motors. Heavy gage steel cabinets. Baked-on enamel finish. Wide selection of sizes for steam or hot water.
