PLAINTIFF'S EXHIBIT

KRC-397

KERR-McGEE CORPORATION

INTERNAL CORRESPONDENCE

TO Distribution

DATE August 13, 1986

FROM Evan R. Goltra, M.D.
Corporate Medical Director

SUBJECT Asbestos

Medical Services is requesting your assistance in determining how much asbestos containing material (ACM) can be found in KM facilities. This information will be used to estimate the potential cost of asbestos removal to the Corporation.

It is not necessary for each facility to analyze the insulation, fire-proofing, roofing felts, etc. to determine their asbestos content at this time. All Medical Services requests is to reasonably estimate how much asbestos containing material can be found in the facility.

One helpful guide in this determination is any material such as surfacing material, thermal or acoustical insulation, textiles, roofing felts, etc. purchased prior to 1975-1977 that has fire retardent properties will probably contain a percentage of asbestos.

It is important to receive this information no later than September 15, 1986.

All information pertaining to this request or questions concerning this memo, should be directed to Dennis Johnson (x2918 - MT 604).

Asbestos Survey

All asbestos containing material (ACM) has been removed from this facility.

_____Yes
_____No
_____Partially Removed

Estimated quantity of asbestos containing material: _____ sq. ft.

Condition of material:

	Square Feet
Intact, undamaged	_____
Minor damage (punctures, cuts, exposed ends)	_____
Moderate damage (broken, cracked sections, crushed wrapping)	_____
Severe damage (needs immediate attention)	_____

Estimated quantity of material that is friable: _____

"Friable" refers to material that can be crumbled, pulverized, or reduced to powder in the hand and can result in the release of asbestos fibers into the air.

Are plans being made to perform any removal of ACM in the next 12 months?

_____Yes _____No
