Attention: Mr. Donald E. Roush
Engineer Specialist
Functional Fluids

Dear Mr. Roush:

Recently one of our field service engineers took an accidental bath in hot therminol FR-2. The doctors covered his burns with a cream salve and this turned out to be the wrong thing to do. They neglected to wash all of the therminol off of his skin before applying the cream, and this seemed to make the burns worse, not better.

This experience caused the service engineer to ask us to contact you and get any recommendations on handling procedures, safety precautions and antidote information that might be available from your company.

We would appreciate receiving any information you have in this area.

Sincerely yours,

THE INTERNATIONAL BOILER WORKS CO.

Ed Mordt
