Gerald E. Gunning, Ph.D.
3608 45th Street
Metairie, Louisiana 70001

Dear Dr. Gunning:

Attached are laboratory results of PCB's in the collection of fishes obtained on June 11-12, 1974.

We analyzed all the lots you marked with an asterisk as indicated on your previous correspondence (copy attached). I am sending the results for your analysis and interpretation. PCB's are expressed as 1254.

I am somewhat concerned in that in most cases the recent data would indicate higher level than previous data. As we discussed on the telephone, our laboratory method and equipment may be more sophisticated than previous methods and equipment. However, I will reserve all judgement pending your interpretation of the results.

Also, attached are data related to water and sediment taken on 3/29/74.

Call me or write if you have any questions or comments related to the data. When you complete your analysis of the data, send your report to my attention.

Edward E. Stewart

P.S. Incidently, we still have your cooler in use.
