International Headquarters
Standard Oil Company (Indiana), Chicago

PRODUCT PERFORMANCE –they're getting it with ZONOLITE MONO-KOTE Fire Protection.

ZONOLITE® MONO-KOTE® is being used to fire-protect the interior portions of the new 82-story international headquarters for Standard Oil Company (Indiana) in Chicago.

Sprayed directly to the building's structural steel members, it's meeting the critical needs of the owner, architects, contractor and subcontractor—thanks to its outstanding performance.

The owner is getting a product that meets his most critical requirement: protecting the structure in the event of fire.

The architects needed a material that could meet building code requirements—and state and city standards prohibiting asbestos in the formula. (W. R. Grace & Co. helped them both ways with ZONOLITE MONO-KOTE.)

The general contractor required the assurance that the fire protection application would not slow down his construction schedule.

The subcontractor needed to keep ahead of schedule—and did by pumping MONO-KOTE at the rate of 1,000 bags a day. Pumping to heights of more than 700 feet (without having to move equipment), he often completed two floors every three days.

So—for this "showcase" job—everyone is getting what he needs most in a fire protection material. Plus the service and reputation of W. R. Grace & Co.

ZONOLITE MONO-KOTE delivers a full range of fire ratings. It is available from plants throughout the United States and Canada, to meet tough schedules. For complete information, contact your ZONOLITE sales office or ZONOLITE, W. R. Grace & Co., Construction Products Division, 62 Whittemore Ave., Cambridge, Mass. 02140.
