RE: Supplemental Comments To The PCB ANPRM Regarding Sediment Cleanup Criteria

---

Attached is a copy of the latest draft letter to EPA opposing their use of the equilibrium partitioning method to develop sediment criteria for PCBs. I have incorporated all of your comments. Also included are copies of the comments made to EPA's Water Program concerning the equilibrium partitioning method. It is interesting to note that several of the comments from within EPA and other federal agencies were negative. My overall sense from skimming the comments is that most comments had reservations about or outright opposed use of the method as proposed by EPA.

If you have any questions, please give me a call.
