June 3, 1969

Mr. Fred E. Meyer
Thermoset Plastics, Inc.
5101 East 65th Street
Indianapolis, Indiana 46220

Dear Mr. Meyer:

Your letter of May 21, 1969, requesting information on our products Aroclor 1232 and Aroclor 1254 has been referred to me for reply.

According to the classifications and definitions in Tables 1 and 3 accompanying your letter, both of these products would fall in the category of "Class 2 - Mildly irritating" in Table 1 and "Toxic by percutaneous absorption" in Table 3.

Whether or not epoxy resin formulations containing these compounds would be classified similarly, obviously depends not only on the amounts of Aroclor in the formulations and the toxicity characteristics of other components of the formulations but more specifically on animal toxicity data on the formulations per se.

If I can be of any further assistance, please let me know.

Sincerely,

Elmer P. Wheeler
Manager, Environmental Health
Medical Department
