exposed individuals?

A Well, it depends on the level of exposure.

In Dr. Selikoff's study which was a large study of insulation workers in North America, he found the incidence to be on the order of a thousand times what the background incidence would be.

Q Now, Doctor, you mentioned asbestos.

What is asbestos?

A Asbestos is a naturally occurring mineral. It is in rock formations. It is mined. It is a fibrous mineral, and it has been used in a variety of industrial applications.

Q Are there different types of asbestos?

A Yes, sir, there are.

Q And have you brought along with you today a slide that depicts the various types of asbestos fibers?

A Yes, sir, I have. This is -- we can skip this, but this is another slide showing peritoneal mesothelioma growing around the intestines and encasing them.
