Referring to your Telex dated May 31:

1. o-chlorobiphenyl is being used increasingly as a dye carrier. Also, we are at present using Aroclor 1221 with polychlorinated terphenyls (Aroclor 5000 series) to produce plasticizer blends which we call the Aroclor 6000 series. We believe Aroclor 1221 is environmentally acceptable because it degrades easily. If governmental agencies object to the di and tri chloro biphenyls in Aroclor 1221 we can resort to using o-chlorobiphenyl.

2. I have attached Mr. R. A. Lidgett's summary of his work at Ruabon in which he compared Aroclor 1242 with MCS 1016 (now referred to as Aroclor 1016). He will prepare a more complete report on this work which I will forward to you when I receive it.
