SUBJECT: ABEX FORMULA CHANGE - CERTAIN PART NUMBERS

We are changing the part numbers listed in the attached letter from Abex based on a study of over 1,400 alleged defective and lifetime warranty returns. This change will help reduce "Brake Noise" complaints. We want to do this as soon as possible, but Abex has a capacity problem at the present time. The attached letter also explains when the new formula will be available.

Once you have received the new formula for a particular part number, you should return all inner and outer pucks of the old formula immediately. Abex will issue full credit for the pucks and freight charges.

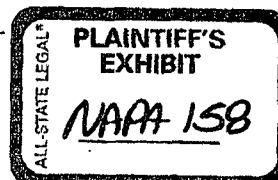

If you have any other questions on this subject, please let us hear from you.

Best regards,

Paul
