

NUMBER: 29
PRODUCT: 3M Analysis Service
SUBJECT: _____

TECH DATA

You wouldn't believe the compounds we are asked to do.

The #3500 does not do sulfuric acid or lead dust. Please be sure your customers and distributors understand the following points:

- (1) We only do the compounds specified on the Analysis Service List. This is not the same as the Compound Guide - only those compounds in BOLD type in the new Sampling Guide (R-35SG).
- (2) The full chemical name from the Analysis Service List should be used. Abbreviations can cause trouble.
- (3) We will analyze a maximum of eight (8) compounds per individual monitor. We have had people ask us for up to fifteen.

If the above points are followed, we can process requests immediately. If not followed, we have to track down the customer, and the fast turnaround time disappears.
