NEW LIGHTWEIGHT MONO-BLOCK

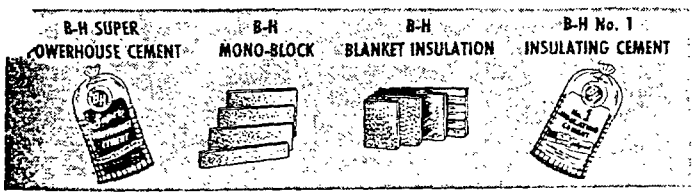

made with BALDWIN-HILL *Spun* MINERAL WOOL

Induced Draft Flue to Stack of Power Plant insulated with B-H Mono-Block.

Lower density is provided by felting the longer, finer fibers of the NEW B-H Spun Mineral Wool and contributes to its light weight and ease of handling as well as high insulating efficiency — up to 1700° F. And it is stable under high heat and moisture conditions. Easy to cut with a knife to fit odd shapes and impales over studs, clips or wires.
