Therminol/Santotherm Contamination of Cooking Oil - Smith Potato Crisps, Holland

D. S. Cameron - BRUSSELS
M. Schuitema - THE HAGUE
NTJ/RD/SS
T. Denton-Roberts - LONDON

D. Wood - BRUSSELS FROM:

Dave, I have affixed copies of two reports from Dr. Keller's group on subject cooking oil contamination. The latest memo dated March 7, 1968, indicates that there is less than 20 parts per million Therminol/Santotherm FR-1 in the used peanut oil. Also indicated is the need for more sensitive measurements, which will be made when the analytical equipment has been repaired.

Dr. Keller's group is cognizant of the problem we have with chlorinated biphenyl contamination in the food processing industry and have been doing a fine job with this very difficult analytical problem. I shall notify you of further developments in this area when the information is available.

Best regards.

Don Roush
