Wed. July 18, 1956 2:30 p.m.

PLAINTIFF'S EXHIBIT K-1061

Telephone call from Dr. Shook of Owens-Illinois, Toledo. (and Bill Hazard).

They are sending us (today) the lungs of one of their watchman who died. This may be a medico-legal case for silicosis but Dr. Shook doesn't believe the man had silicosis - he had no exposure to silica dust.

The data about the occupational exposure, etc., will be forwarded to us from the Libby plant
Owens Illinois
Toledo

and our report should be sent there.

However, send copies of the report and all pertinent correspondence to Dr. Shook also.

PLAINTIFF'S EXHIBIT Kirstein-148 8-28-98

Dr. Shook wished to tell Dr. Bristol that he (Dr. Shook) doesn't like the new forms.

Also, films of Lee Bryston will be coming along soon. Would like to get reading as soon as possible - please push it through. Question of silicosis? T.B.?
