P1 RAUL 150

December 26, 1956

Dr. Joseph F. Treon
The Kettering Laboratory
College of Medicine--Eden Avenue
University of Cincinnati
Cincinnati 19, Ohio

Dear Joe:

Attached are copies of a recent exchange of memos with Sido. You will note that Bob doesn't describe the NAMRI tests in detail but it would appear that the clue to the whole project is "All of their work has been with saturated atmospheres."

I would be interested in why Siegel "feels that their high skin absorption contradicts some of Dr. Treon's data." At the moment, however, I am so darn mad that I don't think it would be appropriate to set up a meeting with Siegel.

I don't know what Bob expects to hear from the Bureau of Ships after January 15th, but I expect it will be that they cannot go ahead with the trial use because of BuMed's objection. Perhaps Bob will have more information for us before then; if so I will send it to you.

Sincerely yours,

Elmer F. Wheeler
Assistant Director
Medical Department
