Their own people are recommending that. Do you know what is going on in 1970? Mr. Grewe is getting exposed. Mr. Grewe is breathing that dust.

March of '70 industrial hygiene supervisor described the dust containing 25 percent asbestos as toxic.

Mr. Grewe is getting exposed.

1971 industrial hygiene recommends that compressed air not be used. Mr. Grewe is getting exposed.

Do they tell him? Do you know when Ford first puts a warning on their box? 1980, ladies and gentlemen, 1980.

Look at all of this time that Mr. Grewe is breathing that dust. The medical evidence will show each and every occupational exposure. Each and every occupational exposure is a substantial contributing factor.

1975, Ford receives NIOSH letters stating that scientific literature has reported four mesotheliomas in brake service mechanics.
