File Northwestern

Northwestern Study Strategy

Purpose: We must establish to new a relationship for dealing with Northwestern on the use of the Krummrich worker study since the current contract has expired and the researchers are interested in publishing further. This new relationship must assure the health of workers, be based on good science, and keep us and our workers informed about future uses of the data. We should establish this new relationship as soon as possible given recent undertaking of the Northwestern researchers in use of our data and our worker's health data without our knowledge or approval.

1. Jaffe and I meet with Hryhorczuk and Dolan to review Fertility Level of Pentachlorophenol Workers
    - Share our reviews with them and get their feedback.
    - Determine how firmly they believe conclusions of original report and see if they are willing to do reanalysis of data and rewrite.
    - Ask them to work with us to craft worker communication.
    - Find out their plans for publication.

Jaffe and I meet with Wallace and Hryhorczuk to:

- Discuss pass handling of study data using the recent dissertation of an example of what has gone wrong.
- Make our needs known including worker communication, good science, and lead time planning.
- What are the health concerns, if any, of Northwestern group on the health of the Krummrich workers.
- Express need for new contractual relationship. Use draft letter of Snively as basis for agreement.
- Reconstitute Peer review committee whose purpose will be:
    - Review and prioritize research agenda
    - Review all study protocols and study reports
    - Assist in worker communication

Set up Peer Review Committee

- At least 3 members (one Union appointed, one University, and one Monsanto)
- Meets as needed

1. We will ask Northwestern to fund, but we should be prepared to fund.

I believe you should proceed according to your plan but hold on the commitment to future work, peer panel, etc until you have complete agreement that they feel a new contract is possible. Once you get to this point I would start to identify the issues that need to be addressed on both sides. If needed agree to a next meeting to begin the negotiations.

This two step approach gives us the chance to see where they are headed and what their issues are befoe we begin to commit.

Attached find our strategy for dealing with Northwestern given our current contract has expired and there is still interest on Northwestern's part to continue to publish from the data. There is some urgency in going ahead with this plan given the EPA's recent interest in the fertility study of the penta workers.

We have also included Dr. Mark Cullen in our thinking. Cullen has represented the Union at Krummrich in reviewing the Northwestern study. Mark will be helping us work through the process of how best to deal with Northwestern at this point.

Dan and I will be meeting with Hryhorczuk and Dolan (the author of the fertility dissertation) on October 31 to discuss our concerns with this study and work on the communication for workers. We plan to meet with Wallace at a later date to discuss the new contract.

Let me know if you have any concerns.

Jim

proposed contract with Northwestern, and our draft communication to workers at Krummrich.

Jim
