Case - [REDACTED]

Dr. Robert A. Kehoe
Laboratory of Applied Physiology
University of Cincinnati
College of Medicine,
Cincinnati, Ohio

Dear Doctor:

Mr. [REDACTED] died on July 28, 1937 and the Industrial Accident Commission, acting upon Mrs. Telepnev's application, has reopened the case.

Mrs. [REDACTED] action was probably prompted by the finding of the Coroner's jury that her husband's death was caused by lead poisoning. Dr. Gertrude Moore, who performed the laboratory work in connection with the autopsy, reported finding substantial deposits of lead in the mixed tissue and rib section. This, as you will recall, is directly opposite to her findings just previous to the time the case was heard by the Commission.

I am sending you this information because of your interest in the case in order that you may be currently advised. If you have any suggestions or comments, I shall be pleased to have them.

Yours very truly,

JFP:LWL
