Canadian department, associations, and boards: governmental agencies private provincial agencies.....	12-39
International safety organizations.....	12-41
Educational institutions: degree programs safety engineering courses offered as part of other degree programs cor- respondence courses.....	12-43
Bibliography of safety and related periodicals: safety indus- trial hygiene and medicine fire.....	12-45
Industrial accident prevention books.....	12-46

The safety engineer frequently needs highly specialized or up-to-the-minute unpublished information as well as knowledge of the work and publications of trade associations, public agencies, and private service organizations. These sources are numerous and their charters of responsibility are varied. As an aid in the safety man's search for information, this chapter categorizes sources and defines their functions. A chart

showing how the various sources of information can be tapped in order to find a solution to a safety problem is exhibited in Fig 12-1, shown on the next page.
