Bill briefly - what is significance of Chlorodibenzofurans when material was found in Bayer/Rodelic product that was pressure to reduce

D. Wood.

Chlorodibenzofurans are very highly toxic. Many effects on birds and animals noted and originally attributed to PCBs where later found to be due to furan content. There is currently no legal or regulatory pressure to reduce. Subject, however, is very emotional and could result in further pressures to eliminate PCBs from all uses. WB Papageorge
